USHIO NORIKI**(54) ELECTROLYTE FOR DRIVING ELECTROLYTIC CAPACITOR****(57)Abstract:**

PURPOSE: To improve a shorting property without decreasing conductivity at low temperature by adding polyglycerol into an electrolyte comprising a solvent and a solute.

CONSTITUTION: Polyglycerol is added into electrolyte, which uses a solvent and organic acid and inorganic acid or their salts as a solute, so that the quantity of addition of polyglycerol is 0.5-20wt.%. Thus, the electrolyte for driving an electrolytic capacitor wherein the molecule weight of the polyglycerol is 300-1500 is prepared. In this way, the shorting property can be improved without decreasing the conductivity at low temperature.
